

AUDIO / VIDEO TRANSMISSION

Audio Video Transmitter Modules

These modules are available in various power outputs and frequency bands. They are powered from 12Vdc apart from the 50mW at 5Vdc. The audio input is line level and a mini switch selects one of the four frequencies in the band.

Generally speaking, the clear air range in metres equals the power in mW.

AVRX Receiver

The AVRX is an audio and video receiver which is available in either the 900, 1200 or 2400mHz band. Video output is 1V p-p and audio is line level output. Each receiver has four pre-set frequencies which can be selected via an external slide switch.

AVAILABLE FREQUENCIES

Band	Channel 1	Channel 2	Channel 3	Channel 4
900mHz	910	980	1010	1040
1200mHz	1080	1120	1160	1200
2400mHz	2413	2432	2451	2470
