

## H20SD (&SD-MIL) H/HELD CONTROLLER

The H20SD hand held controllers are designed to be used with HarrisTech pan & tilt units, Sony block cameras or any conventional motorised zoom lenses.

The H20SD are housed in black powder coated diecast metal boxes and the functions are accessed and controlled through paddle switches and a speed control potentiometer.

There are two variations on the H20SD, the H20SD-XLR & H20SD-MIL.

The XLR version has *XLR* connectors for pan & tilt, lens and 12VDC. An alternative, H20SD-XLR-B, has a 9V battery compartment instead of the 12VDC XLR socket.

The MIL version has an *XLR* connector for 12VDC while the *MIL-C* connector runs pan & tilt and the camera functions. It also has a BNC for video output.

Dimensions are: 35 x 120 x 100mm (plus switches and connectors).
